

Dear Chris
Thanks for the draft Evaluation Report.
I have just one comment which applies in two places.

On page 6 of 26 in the Appraisal document and on page 7 of 18 under the third tab of the Evaluation Report the licensed indications for the various products are given:

- D-Gam 500 IU is also licensed for potentially sensitising events after 20 weeks of gestation.

This small section seems to have been missed out.

Kind regards
